Windows Firewall: Allow local port exceptions

Display [Properties](#).

Requirements:
At least Microsoft Windows XP Professional with SP2

Description:
Allows administrators to use the Windows Firewall component in Control Panel to define a local port exceptions list. Windows Firewall uses two port exceptions lists; the other is defined by the "Windows Firewall: Define port exceptions" policy setting.

If you enable this policy setting, the Windows Firewall component in Control Panel allows administrators to define a local port exceptions list.

If you disable this policy setting, the Windows Firewall component in Control Panel does not allow administrators to define a local port exceptions list.

If you do not configure this policy setting, the ability of administrators to define a local port exceptions list depends on the configuration of the "Windows Firewall: Define port exceptions" policy setting. If that setting is not configured, administrators can define a local port exceptions list. If it is enabled or disabled, administrators cannot define a local port exceptions list.

Setting	State
Windows Firewall: Protect all network connections	Not configured
Windows Firewall: Do not allow exceptions	Not configured
Windows Firewall: Define program exceptions	Not configured
Windows Firewall: Allow local program exceptions	Not configured
Windows Firewall: Allow remote administration exception	Not configured
